

THE BURTON BULB - The Most Elegant LED Ever Designed!

Smart. Simple. Elegant. Innovative. Neo-Vintage.

Finally, a completely new vintage Edison replica light bulb with a whole different experience...
Using the light bulb as art to accent the perfect ambience in your home, bar or restaurant.

High Quality

This meticulously crafted vintage replica preserves the look of the 20th century with a spiral LED filament with phosphorous doping. This eliminates the harsh glare and fake look of "vintage" bulbs that use straight LED segments.

Dimmable

Each Burton Bulb is crafted with exceptional quality electronics to eliminate the need for special LED dimmer switches. The Burton Bulb replicates the look of vintage incandescent while dimmed. True color dimming guarantees the Burton Bulb will dim with the same color, a nice amber glow, all the way down to 0%

Flicker-less LED Technology

With more studies being published every month about the negative effects to humans, The Burton Bulb is the only LED bulb on the market with Flicker-less LED technology. Our engineers have worked tirelessly to reduce invisible flicker and completely eliminate visible flicker! Even when dimmed!

Eco-Friendly

Guaranteed to exceed 25000 hours of life thus reducing the amount of waste and extending the time between replacements. Also, as energy becomes more expensive, the Burton Bulb is an asset to saving money and conserving energy.

Elegant Design

Beautiful and simple, designed to preserve the 20th century as well as accent many different decors, from vintage to rustic to modern.
